

Planned to move to biquad filter later for better filtering

## Soon will implement EFK to replace complementary filter pos\_x(Z) pos\_y(Z) // Inverse kinematic below : // robot configuration : cosAz(Z) cosAz(Z) sinAz(Z) sinAz(Z) → pos\_abs\_az(Z) cosAz(Z) sinAz(Z) Robot Odometry estimation Complementary Filter roll-over ()soo sin() ADNS505 Odom ADNS505 Odom VXoptical(z) VYoptical(z) VXwheel(z) VYwheel(z) pos\_az(Z) χ Wheel radius in meter unit Wheel radius in meter unit 3 wheels Omni forward kinematic w1(Z) w2(Z) and ω3(Z) is wheel angular velocity in rad/s Convert ITG3205 reading to rad/s sin(120°) wz(Z) gyro\_offset ω3(Z) ω2(Z) ω1(Z) ω2(Z) ω3(Z) ω\_itg(Z)

// / +y <---o // v3 ---- v2 // Inverse kinematic below :
